FASSMER

# Accommodation ladder plant for Passenger Ship/Yacht

under deck stowage system with automatic sea-lashing device

## Technical Description

The complete system is stowed under deck automatically with a sea-lashing device. A totally safe twist lock system to connect the swivel platform to the deck is included. The accommodation ladder is suspended from two davits. The electrical driven davits telescope simultaneously. Both electrical winches lower the ladder simultaneously to the deck. One side lowers the ladder to the swivel platform and the other positions the accommodation ladder ready for use on the pier. Generally the steps are mounted in noiseless bearings.
