Fast Rigid Rescueboat (FRR)

FR(I)R Fast Rescue Boat

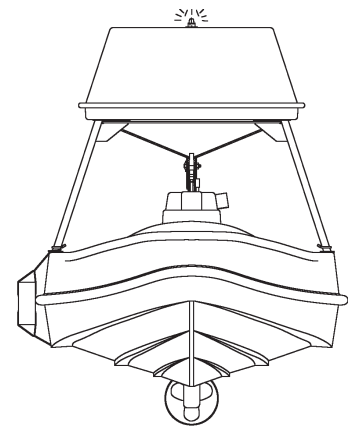

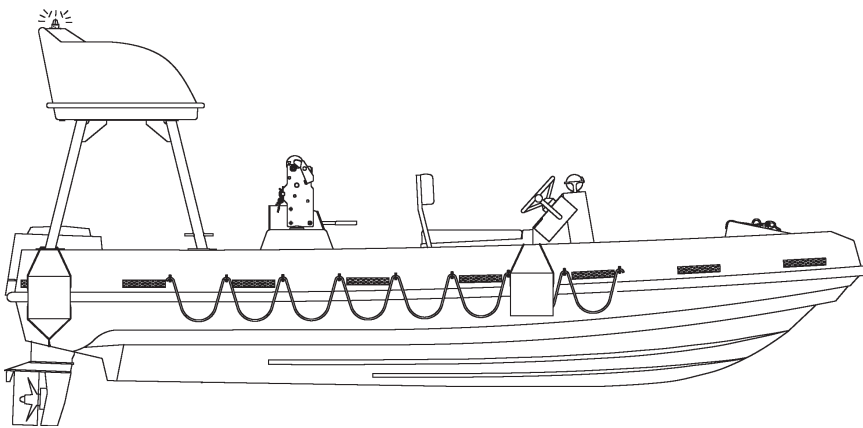

This relatively large boat is intended as a rescue boat for Ro-Ro passenger ferries, cruise ships, work vessels (supply ships, buoy layers, cable layers, pipe layers) and offshore oil platforms. It features compact, lightweight variable modular construction. It is optionally available in a semi-rigid version of fiberglass-reinforced polyester resin (FRP) and an inflatable collar or in a rigid all-FRP version. The boat is driven a powerful outboard motor with a rating of up to 103 kW (140 h.p.). Foam sandwich construction makes this boat absolutely un-sinkable, and internal foam flotation rights the boat in the event the boat capsizes. The boat is moved on a permanently installed hoisting hook with water pressure protection. The boat is approved in compliance with IMO MSC / Circ. 809.
