

COMPETENCE

FASSMER

Competence

Fassmer is a dynamic company in the fifth generation of family owners, headquartered in Berne/Germany. Our international success is firmly footed on six business areas: **Shipbuilding, Boats and Davits, Wind Power, Composite Technology,** and **After-Sales Service.**

Thanks to our skilled and motivated employees, an experienced R&D department, and modern production facilities, our customers are guaranteed utmost competence in all of these areas. The company has a reputation for outstanding quality both in products and in services. Holger and Harald Fassmer's commitment to long-term success is especially apparent in their focus on customer satisfaction.

Locations / Production plants

The Fassmer GmbH & Co. KG site in Berne, Germany, is the company's head office. Located directly beside the river Weser, this site houses the administration offices, the development and design department, and production workshops for all five product divisions – Shipbuilding, Boats and Davits, Deck Equipment, Wind Power, and Composite Technology.

Shipbuilding

An expert in-house design and engineering team, backed up by modern production facilities, provides Fassmer with an exceptional capacity for innovation and imaginative technical shipbuilding solutions. Fassmer can look back on a long tradition of designing and constructing one-off custom-built special-purpose vessels. Fassmer also assists customers with building vessels locally anywhere in the world. To this end, Fassmer offers material packages or pre-fabricated shipbuilding kits as well as basic and detailed design, in combination with technical assistance and training.

Our products:

- > Special purpose ships
- > Research ships
- > Ferries
- > LNG-Competence
- > Patrol boats and offshore patrol vessels
- > Yacht refit / Explorer yachts / Crossover
- > Offshore, survey and supply vessels
- > Naval vessels

Boats

When it comes to lifeboats, davits, yacht or navy solutions, Fassmer's products are innovative and individual. We provide lifeboats for renowned cruise ship operators; with our in-house research and design department, we can match any specification the client requests. Our yacht tenders and boats are sleek, luxurious, elegant, and customised. Many allow the use as a combined guest-and-owner tender and fully certified SOLAS lifeboat. With our long tradition of building rescue, life, and tender boats, we can easily meet any requirement.

Our products:

- > Life, tender, rescue boats for
 - Cruise Vessels
 - Yachts
- > Totally enclosed life and rescue boats for
 - Commercial ships
 - Offshore platforms
 - Special ships
- > Special operation boats for
 - Naval vessels

Fassmer Defence

Designed to meet the hardest environments and highest demands, Fassmer ships and boats for defence and security are the solution of choice for navies and coast guards' high-performance requirements. All Fassmer Defence products are developed to exacting requirements and specifications, with Fassmer's traditional reliability and well-known quality. Our portfolio allows customers to select standard designs and proven products, but developing new solutions tailored to specific customer requirements is a key part of our DNA.

Our products:

- > Fast combat crafts
- > Coastal patrol vessels
- > Offshore patrol vessels
- > Littoral mission vessels
- > Patrol corvette
- > Multipurpose patrol vessels
- > Military boats

Wind Power

The new and remarkably innovative market of wind power technology needs progressive and sustainable solutions. Fassmer is internationally famous for its wide range of components and system solutions. The latest high-performance materials guarantee high-quality product characteristics. In this sector, the most important qualities are lightness, extreme rigidity, and long life cycles. Fassmer not only manufactures fiberglass and aluminium components for turbines and nacelles, but also stands out with its offshore solutions, including boat launching systems, helicopter winching areas, and service boats for offshore wind farms.

Our products:

- > Nacelles and spinners for wind power turbines
- > Offshore service solutions:
 - Helihoist
- > Wind Service
 - Maintenance and repair of wind turbines (onshore and offshore)

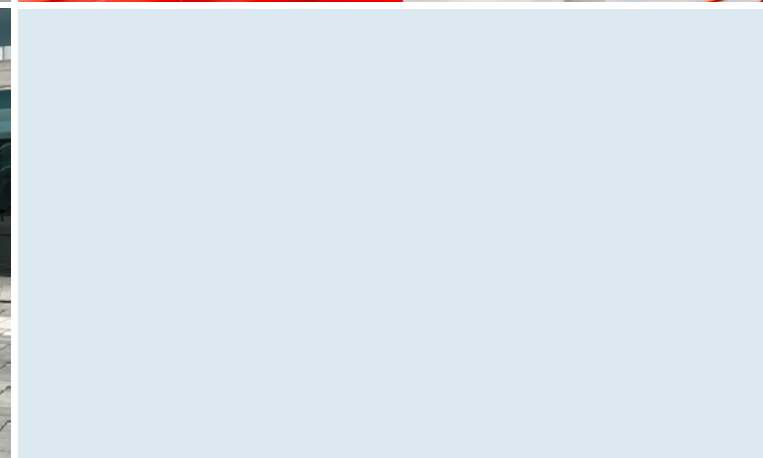

Composite Technology

Our competence in fibre composites is based on over 50 years' experience, highly trained and motivated employees, and expertise in a wide range of products and production processes. We see ourselves as partners for our customers through development, design, prototyping, and serial production. Our production plants in Germany, Poland, and China are equipped to deliver high flexibility, cost-effectiveness, and quality.

Our products:

- > Structural elements
- > Fibre-reinforced components for all industries
- > FRP new components, repair, renovation, design alterations and coatings for amusement parks and pools
- > Structural elements for construction machinery and rail vehicles
- > Custom components

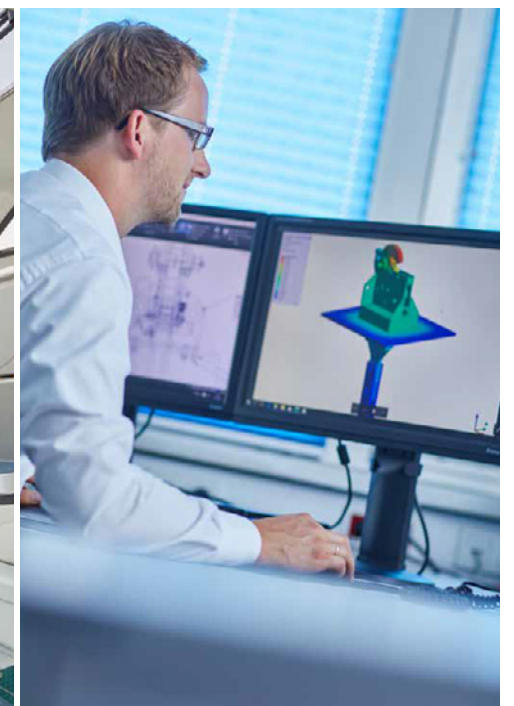

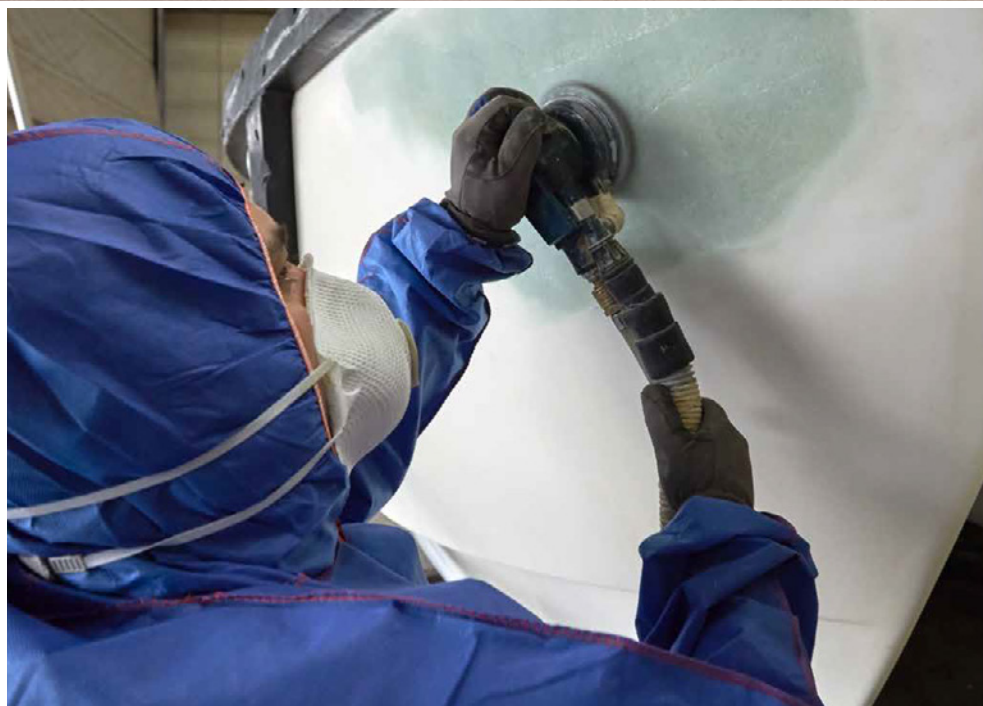

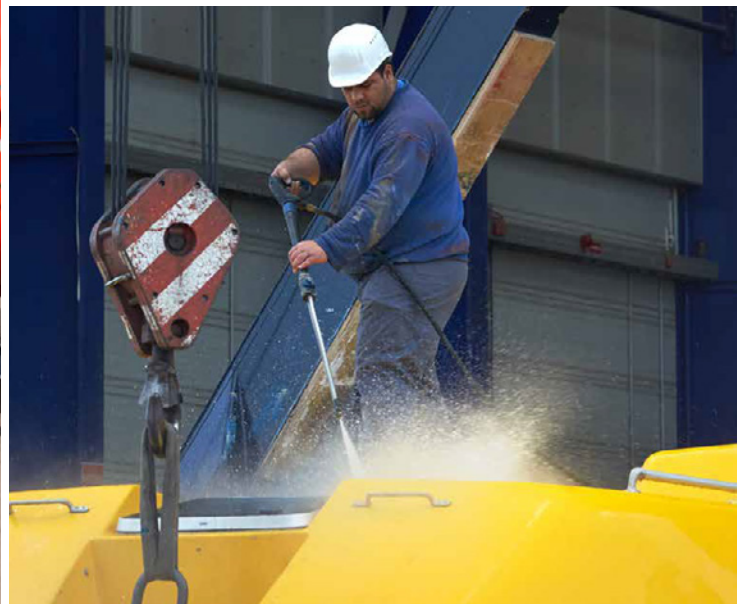

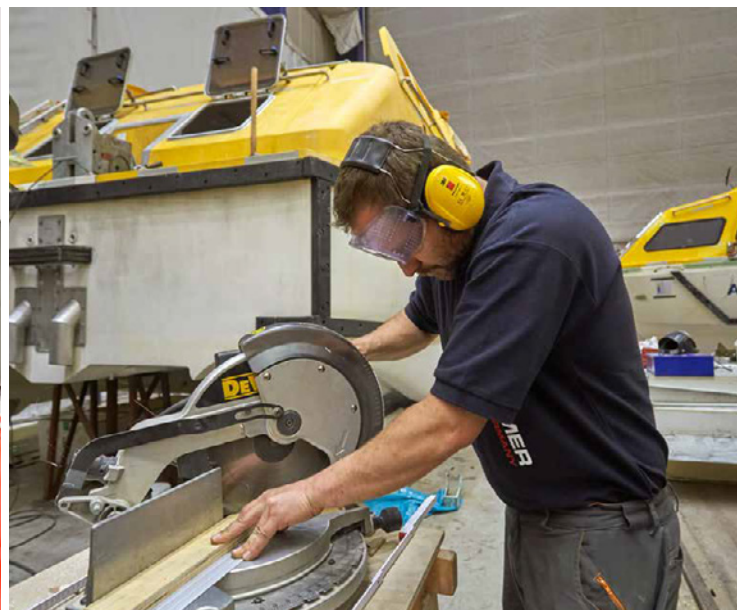

After-Sales Service

Our expertise includes outstanding after-sales services. With our dedicated service companies in Germany, America, Singapore, and other world-wide service partners, we provide round-the-clock response supported by almost 250 authorised service engineers, in 60 countries around the globe. This way we ensure the availability, safety, and reliability of our products at all times.

Our services:

- >> Annual & 5-yearly service of lifeboats, rescue boats, davits, and deck equipment
- >> Repairs, refits and retrofits
- >> Fibreglass repairs on boats, pools, slides, and any other GRP-/Carbon-Fibre-made products on your ships
- >> Upgrades of Fassmer release and retrieval systems
- >> Re-hooking non-Fassmer lifeboats with Fassmer release and retrieval systems
- >> Worldwide installation, commissioning, and testing
- >> Fassmer SHIELD fleet service agreements
- >> OEM spare parts supply
- >> Training
- >> Engineering and technical support

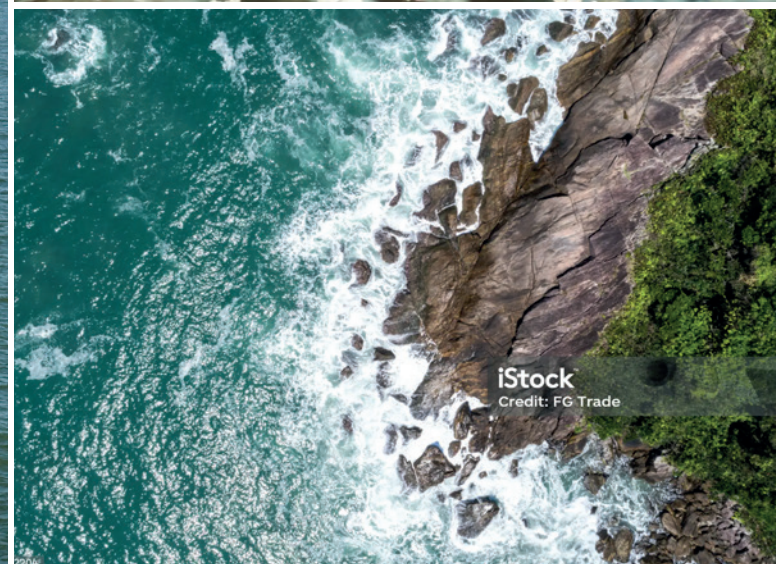

Sustainability

As an industrial company, we are determined to make our contribution to achieving the European climate protection targets. In doing so, we are focusing on a variety of initiatives and projects that improve our environmental footprint. To reduce greenhouse gas emissions, we are gradually switching to renewable energy sources and using them more efficiently using energy management software. To conserve resources, we are reducing the waste of our materials. And since 2023, we have also been ISO 14001 certified.

Our actions:

- > Energy efficiency
- > Reduction of greenhouse gas emissions
- > Conservation of resources
- > ISO 14001 certification
